

## A Memorable Day in My Life

Good morning everyone,

Today I would like to share with you a memorable day in my life. We all have some special days that stay in our hearts forever. For me, that day was when I won first prize in a school science exhibition.

This happened when I was in class 10. Our school had planned a big science exhibition where students had to make projects and explain them to teachers and visitors. I was very excited but also a little nervous because it was my first time participating in something like this.

I decided to make a smart home system using basic electronic parts, sensors, and an Arduino board. I had always been interested in technology and how we can use it to make life easier. My project was about how we can control home lights and fans using sensors, and how it can help save electricity. I worked hard on the project for many days. I watched YouTube videos, read articles, and also took help from my elder brother to understand the connections and coding.

The day of the exhibition finally arrived. I was a bit scared in the morning, but I told myself to stay calm and do my best. I went to school early and set up my model on the table. Many students and teachers came to see it. Some asked questions, and I explained everything step by step.

Later, the judges came. They were three science teachers from different schools. They asked me about the working of my project, how it can be used in real life, and what problems I faced while making it. I tried to answer all the questions clearly. I was shaking a little at first, but once I started talking, I gained confidence.

After everyone finished presenting, we waited for the results. I didn't expect much, I just felt happy that I completed my project and explained it properly. But when they announced the winners and called my name for the first prize, I was shocked. I couldn't believe it. I received a certificate, a small trophy, and a gift box.

That moment was very special to me. It was the first time I felt truly confident about my abilities. It also encouraged me to follow my interest in technology. Since that day, I started learning more about electronics and coding, and now I want to become an engineer in the future.

That day taught me one important lesson — if you work hard and stay focused, success will come. Even if things seem difficult at first, we should not give up. I will always remember that day as one of the happiest and proudest moments of my life.

Thank you so much for listening to my story.
